Fourth Year Computer Engineering Student
Sirindhorn International Institute of Technology (SIIT), Thammasat University

SUMMARY

High-achieving fourth-year Computer Engineering student (3.92 CGPA) and President of SIIT Robotic Club (OrcaBOT). Proficient in **embedded systems design** using **C++**, **Python**, and **ROS2**, with peer-reviewed research publications. Proven leader in managing technical procurement (budgeting **100,000+ THB**) and an award-winning communicator with a track record in technical pitching for innovative solutions in EdTech and Sustainability.

EDUCATION

Bachelor of Computer Engineering, SIIT, Thammasat University Expected 2027
CGPA: 3.92 (Expected First-Class Honors); Recipient of Academic Outstanding Student Scholarship.

- *Relevant Coursework*: Machine Learning & Pattern Recognition, Natural Language Processing, Big Data Analytics, Computer Vision, Quantum Computing, Computer Networks, Operating Systems, Database Systems, Algorithm Design.

SKILLS

Programming	Python, C++, Java, ROS2, micro-ROS, Basic Assembly, LaTeX
Systems & DB	Relational Database Design, SQL (MySQL), Ubuntu Linux, Express.js
Hardware	ESP32, Raspberry Pi, Arduino, KiCad, Sensors/Actuators, MATLAB
Technical	Project Management, Research & Technical Writing, Technical Pitching
Languages	Thai (Native), English (Fluent) SAT: 1420 (M:790, EBRW:630), TOEFL (ITP): 553 (B2)

EXPERIENCE

Research Intern, Measurement & Intelligence Systems Lab, Kansai University, Japan Jun–Jul 2026

- Developed a **mmWave radar + thermal imaging sensor fusion** pipeline for autonomous robot navigation in smoke-filled, low-visibility environments where RGB cameras and LiDAR degrade (TI IWR1443, FLIR Boson 320 on TurtleBot3).
- Built the full **ROS2 Humble** integration: custom sensor drivers, hardware-accelerated thermal frame streaming, TF-tree extrinsics, calibration, and **ApproximateTimeSynchronizer**-based multi-sensor fusion overlaying depth-colored radar point clouds in real time.

President & Embedded Systems Lead, SIIT Robotic Club (OrcaBOT) Oct 2023 – Present

- **Leadership**: Leading a 30-member club, managing a **100,000+ THB** procurement budget, and competing in **RoboCup Japan Open 2025** with an automatic soccer robot.
- **Firmware Architecture**: Developed custom C++ motor-control libraries and holonomic drive algorithms; redesigned serial and wireless nRF communication systems to significantly increase responsiveness and stability.
- **Technical Communication**: Primary author of the Software Architecture section (System Overview, Low-/High-Level Design) of the RoboCup 2024 Team Description Paper. [\[Link\]](#)

Intern, NECTEC, NSTDA May 2024 – Dec 2025

- Implemented Fast Segment Anything Model (FastSAM) for a water surface level monitoring system; built a scaled wave-tank coastal erosion test model.
- Presented at IUKM 2025 (Vietnam) and IBD2025 (Bangkok); published in Springer LNCS/LNAI vol 15585.

PROJECTS

- **FlashLight: Companion Study Pacer Application** *Co-Founder, Operations Lead & Pitcher*
Co-founded FlashLight (flashlight.in.th), a study-planning platform pacing Thai students' TCAS exam prep by breaking 368+ A-Level topics into personalized daily missions. Delivered the pitch in every elimination round; reached **Top 5** (of 80+ teams) with an iOS MVP ranked **#7 in Education** on the Thai App Store.
- **CareAir: Air Quality Monitoring & Carbon Capture System (Hackathon Winner)**
Developed "CareAir", a proof-of-concept carbon capture machine designed to improve air quality in classrooms/workplaces. Awarded **1st Place** (Physical Wellness Track) at Thammasat Hackathon: Future Wellness 2024.
- **CrystalEyes: Automated Crystal Imaging System**
Developed a low-cost (10k–15k THB) CNC-based digital microscope system to automate crystallization screening, replicating core functionality of commercial systems costing 1M+ THB. Iteratively designed and built from high school through university; demonstrated with lysozyme growth and MOF studies.

- **Autolocate: Condo Parking Management System**
Designed a relational database backend using **SQL and Express.js** to manage high-traffic condo parking operations, implementing a three-tier connection pool system to enforce role-based access control (RBAC) and ensuring secure authentication via JWT and HttpOnly cookies.

WORKSHOPS & INTERNATIONAL PROGRAMS

- **Staff, PBL Workshop: Automatic Robot in Industrial Conveyor Belt Challenge** August 2026
Planned and organized the event, built the TA demonstration robot, and supervised each participant team. Theme: multi-sensor navigation using **IMU, wheel encoders, and ultrasonic sensors with PID control** for robot heading identification and navigation.
- **Staff, International Project-Based Learning (iPBL) Workshop: Rescue Robot** August 2025
Managed technical logistics and material procurement for teams from SIIT and OIT Japan. Provided hands-on mentorship in robot design and debugging, specializing in ROS2, micro-ROS, and Linux integration on Raspberry Pi and ESP32 platforms, while facilitating cross-cultural collaboration between Thai and Japanese students.
- **Participant, 11th Problem-Based Learning (PBL) Workshop, Taipei Tech, Taiwan** August 2024
Collaborated within an international team (12 universities represented) to design and build a smart autonomous vehicle using Arduino, sensors/actuators, and 3D modeling for color recognition, positioning, and object grasping tasks over 8 days.

AWARDS AND RECOGNITION

- **3rd Runner-Up (Top 5)**, Chulalongkorn University Startup Thailand League (CUSTL) — FlashLight Team
Selected as an **official representative of Chulalongkorn University** for the Startup Thailand League 2026 **Regional Pitching Round (Central Thailand)**.
- **Qualified & Exhibited**, SITE2026 Demo Day (NIA, Paragon Hall) — Startup Thailand League 2026
Pitched FlashLight to VCs and investors from Thailand, South Korea, and beyond.
- **1st Place Winner**, Thammasat Hackathon: Future Wellness 2024 (CareAir Team)
- **Finalist**, ASEAN-China-India Youth Leadership Summit 2024 Sustainability Startathon (Singapore)
- **3rd Place (of 200 teams)**, 5th Kibo Robot Programming Challenge Thailand — developed autonomous navigation and **ArUco marker detection in Java** for ISS Astrobee robots.
